Financial evidence.
Across the whole exposure.

One company. Three connected products.

Source-checkable financial research for people, software and AI agents.

LIQUILENS PRIVATE LIMITED · registered company in India · 5 October 2026

The review is fragmented.

The exposure is connected.

Institution disclosures, funding conditions and market-depth estimates live in different tools, with different clocks and definitions.

Treasury, credit and investment teams need a repeatable review they can inspect. AI agents need those same records in a structured form.

Problem

Three questions.
One review workflow.

LiquiLens → Seiche → Undertow

Institution

What is changing at this bank or lender?

Funding

What funding environment surrounds it?

Liquidity

What does liquidity look like at your size?

Use the relevant products. Keep sources, clocks, coverage and scores separate.

The product is available to inspect.

Browser · REST API · hosted MCP

Public institution research, a USD funding desk and broader market atlas, market-liquidity evidence and stated-size exit tools.

Browser and agent recipes connect those questions and export source-separated briefs.

Try the workflow · Connect an agent · Inspect the methods

Live interfaces are distinct from observation freshness and full release acceptance.

Built in India.
Designed to travel.

International financial teams and software builders

Existing evidence includes India and US institution research, European named case files, deep USD funding, broader reference coverage and cross-market liquidity.

Human and machine distribution can carry that evidence into international workflows.

Additional jurisdictions follow buyer demand, source rights and local validation.

Global access does not imply uniform worldwide market coverage.

A useful entry point. A wider review.

Why one company

An institution review can lead to a funding question. A funding review can lead to a liquidity question.

Shared evidence conventions and public contracts create reusable integration paths across the product system.

Cross-product adoption and lower integration cost are hypotheses to validate through buyer usage.

Complementary products, independent authority boundaries.

Public entry.
Paid recurring work.

Commercial routes

LiquiLens: named-list monitoring software and fixed-scope paid proof pilots.

Undertow: published subscriptions, fund offer and machine-call pricing.

Seiche: free AGPL core; potential support and integration services that preserve its licence.

Published offers are not evidence of completed sales.

Commercial proof is the next milestone.

Early commercial stage

Customer activity and commercial outcomes require separate dated evidence.

Separate external buyer use from operator automation and synthetic checks. Report revenue, customers and retention from dated records.

No customer or revenue count is asserted in this deck. Commercial records belong in controlled diligence.

Evidence discipline applies to business claims as well as research.

Capital should buy repeatable progress.

Proposed milestones

1. Prove recurring use, paid conversion and renewals.
2. Strengthen admitted sources, freshness, reliability and recovery.
3. Expand integrations and jurisdictions through buyer demand and rights review.
4. Build attributable commercial reporting.

Round size and allocations require a reviewed runway plan.

Build the next stage with LiquiLens.

Financial infrastructure · data products · AI workflows

Discuss the company, its commercial milestones and the appropriate venture round structure.
